Global Innovation Index 2021

Executive Summary

In partnership with

Confederation of Indian Industry

Academic network members

Cornell SC Johnson College of Business

This year's Global Innovation Index shows us that in spite of the massive impact of the COVID-19 pandemic on lives and livelihoods, many sectors have shown remarkable resilience – especially those that have embraced digitalization, technology and innovation. As the world looks to rebuild from the pandemic, we know that innovation is integral to overcoming the common challenges that we face and to constructing a better future. The Global Innovation Index is a unique tool to guide policy-makers and businesses in charting plans to ensure that we emerge stronger from the pandemic.

Daren Tang, Director General, World Intellectual Property Organization

Gll 2021 at a glance The Global Innovation Index 2021 captures the innovation ecosystem performance of 132 economies and tracks the most recent global innovation trends.

Global leaders in innovation, 2021

Top three innovation economies by region

Key takeaways

The state of innovation throughout the COVID-19 crisis

1. The GII 2021 finds that investment in innovation has shown great resilience during the COVID-19 pandemic, often reaching new peaks, but that it varies across sectors and regions

Investment in innovation reached an all-time high prior to the pandemic, with research and development (R&D) having grown an exceptional 8.5 percent in 2019.

When the pandemic hit, the big question was what its effect on innovation would be. Historical evidence suggested a severe cutback in innovation investments.

However, despite the human toll and the economic shock resulting from the pandemic, scientific output, R&D expenditure, IP filings and venture capital (VC) deals continued to grow in 2020, building on peak pre-crisis performance:

- Publication of scientific articles worldwide grew by 7.6 percent in 2020.
- Government budget allocations for the top R&D spending economies that have already disclosed their R&D budgets continued to grow in 2020. The top global corporate R&D spenders, for which data is available, grew overall R&D expenditure by around 10 percent in 2020, with 60 percent of R&D-intensive firms reporting an increase.
- International patent filings via WIPO reached a new all-time high in 2020. An increase of 3.5 percent was driven by medical technology, pharmaceuticals and biotechnology.
- VC deals grew by 5.8 percent in 2020, exceeding the average growth rate for the past 10 years. Strong growth in the Asia Pacific region more than compensated for declines in Northern America and Europe. Africa and Latin America and the Caribbean also registered double-digit increases. First quarter figures suggest VC activity will be even more vibrant in 2021.

Firms whose innovation was at the heart of measures to contain the pandemic and its fallout – notably (i) software and information and communication technology (ICT) services, (ii) ICT hardware and electrical equipment and (iii) pharmaceuticals and biotechnology – amplified their investments in innovation. Firms in sectors heavily hit by the pandemic's containment measures – such as transport and travel – cut back their innovation outlays.

However, despite such cutbacks, available data suggest that innovation investments overall proved resilient in the face of the pandemic; and especially so when compared to the depth of the economic downturn.

2. Technological progress at the frontier holds substantial promise

The rapid development of COVID-19 vaccines powerfully fulfills the promise of technological progress. Progress also continues apace in other technology fields – for example, ICT and renewable energy – with the potential to raise living standards, improve human health and protect the environment.

Results of the Global Innovation Index 2021

3. Only a few economies have consistently delivered peak innovation performance

- Switzerland, Sweden, the U.S., and the U.K. have all ranked among the top 5 in the past three years, while the Republic of Korea joins the top 5 of the GII for the first time in 2021.
- The majority of the GII top 25 most innovative economies continue to be from Europe.
- Five Asian economies feature among the top 15 the Republic of Korea (5th) and Singapore (8th) are in the top 10, followed by China (12th), Japan (13th) and Hong Kong, China (14th).

4. Selected middle-income economies are changing the innovation landscape, starting with China, Turkey, Viet Nam, India and the Philippines are now pulling their weight

- China remains the only middle-income economy among the top 30 most innovative economies globally.
 Few other middle-income economies have managed to catch-up in innovation.
- Turkey (41st), Thailand (43rd), Viet Nam (44th), the Russia Federation (45th), India (46th), Ukraine (49th) and Montenegro (50th) make it into the GII top 50 this year.
- The TVIP economies alone (Turkey, Viet Nam, India and the Philippines) are systematically catching up. Beyond China, these four particularly large economies together have the potential to change the global innovation landscape for good.

5. Several developing economies are performing above expectation on innovation relative to their level of economic development

- India, Kenya, the Republic of Moldova, and Viet Nam hold the record for overperforming on innovation relative to their level of development for the 11th year in a row.
- Brazil, the Islamic Republic of Iran and Peru overperformed in 2021 for the first time ever.
- Sub-Saharan Africa is the region with the largest number of overperforming economies.

6. The geography of global innovation is changing unevenly

- Northern America and Europe continue to lead far in front of other regions for innovation.
- The innovation performance of South East Asia, East Asia, and Oceania (SEAO) has been the most dynamic in the past decade, and is the only region closing the gap.
- Northern Africa and Western Asia, Latin America and the Caribbean, Central and Southern Asia, and sub-Saharan Africa then follow in that order, albeit – despite strong performances by the Islamic Republic of Iran, Chile, the United Arab Emirates and South Africa – they remain stubbornly a long distance behind.
- In Latin America and the Caribbean, only Chile, Mexico, Costa Rica and Brazil rank among the top 60. Except for Mexico, few economies in this region have managed consistently to up their ranking over the past 10 years.
- In sub-Saharan Africa, only Mauritius and South Africa rank in the top 65; and only Kenya and the United Republic of Tanzania have remained firmly in the top 100 and improved their performance over time. Rwanda regained the lead position among low-income economies in this year's edition of the GII.

7. New science and technology (S&T) clusters are emerging, with the majority located in only a handful of countries

- Tokyo–Yokohama is the top performing S&T cluster once again, followed by Shenzhen–Hong Kong–Guangzhou, Beijing, Seoul and San Jose–San Francisco.
- The U.S. continues to host the highest number of clusters, followed by China, Germany, and Japan. Clusters in China recorded the largest increases in S&T output.
- Brazil, China, India, the Islamic Republic of Iran, Turkey, and the Russian Federation are all middleincome economies hosting top S&T clusters, with big growth seen in Delhi, Mumbai and Istanbul.

GII 2021 results The GII helps create an environment that evaluates innovation factors continuously.

In 2021, it provides detailed innovation metrics for 132 economies. The following sections present the results of the GII 2021. Appendix I provides details on how to interpret and analyze the results, in particular regarding year-on-year comparison of the GII ranks, which requires cautious interpretation.

The GII 2021 innovation leaders

Only a few economies have consistently delivered peak innovation performance.

Only Switzerland and Sweden have remained in the top three of the innovation ranking for more than a decade. Switzerland, Sweden, the United States of America and the United Kingdom have ranked in the top five for the past three years, while the Republic of Korea joins the top five of the GII for the first time in 2021 (Figure 1).

The top 25 of the most innovative economies are mainly from Europe, with France (11th) and Estonia (21st) making notable progress. Five Asian economies shine in the top 15 – the Republic of Korea (5th) and Singapore (8th) in the top 10, with China (12th), Japan (13th) and Hong Kong, China (14th) following. Singapore has been among the top 10 most innovative economies consistently for the past 14 years.

China is still the only middle-income economy to make it into the top 30. China reaches the top three in the South East Asia, East Asia, and Oceania (SEAO) region for the first time and remains top of the upper middle-income group (Figure 2).

Bulgaria (35th) and Malaysia (36th) are the only other middle-income economies close to the top 30 of the GII (see Table 5), but with no consistent increase in rank over time. Indeed, Malaysia has been hovering close to the top 30 for the past 11 years but has not yet reached the mark.

Japan ranks 13th, up from 16th in 2020. The United Arab Emirates (UAE) (33rd) remains in the top 35 this year and moves up one place. The UAE has been moving up the rankings since 2018, when it ranked 38th. Turkey (41st) makes a big jump into the top 50 and Brazil (57th) moves closer.

Since 2013, China has moved up the GII ranks consistently and steadily, establishing itself as a global innovation leader and getting closer to the top 10 every year. The performance of China is at the frontier of achievement, notably in innovation outputs. For instance, China's levels of patents by origin, scaled by GDP, are higher than those of Japan, Germany and the United States, and are even more impressive when considered in absolute terms. The same is true with regard to the levels of Trademarks and Industrial designs by origin as a percentage of GDP. However, China is still behind, relative to Germany and the United States, in Human capital and research and in indicators such as Researchers (45th) and Tertiary enrolment (57th). China also trails the United States in Market sophistication and Business sophistication, and is even further behind in Institutions (61st).

The Republic of Korea (5th) made notable advances in the Innovation Output Sub-Index (5th) and, in particular, in the indicators Trademarks by origin (8th), Global brand value (5th) and Cultural and creative services exports (40th). It also ranks 3rd worldwide in the new GII output indicator Production and export complexity. In terms of innovation inputs, the Republic of Korea moved up the rankings in two pillars: Institutions (28th) and Infrastructure (12th). It also comes top in the sub-pillar ICTs (1st) and, notably, in Government's online service and E-participation.

A changing global innovation landscape

Selected middle-income economies are changing the innovation landscape, starting with China, Turkey, Viet Nam, India and the Philippines are now pulling their weight.

It is challenging for emerging economies to consistently improve their innovation performance and systems to match high-income, more prosperous economies. Only a limited number of middle-income economies have managed to catch up in innovation, by complementing successful domestic innovation with international technology transfer.

In addition to China, Bulgaria and Malaysia, which lead the middle-income group rankings, only Turkey (41st), Thailand (43rd), Viet Nam (44th), the Russian Federation (45th), India (46th), Ukraine (49th) and Montenegro (50th) make it into the top 50.

However, besides China, only the TVIPs (Turkey, Viet Nam, India and the Philippines) are systematically catching up. All four Asian economies have romped up the ranks by an average of 22 positions in the past decade: Turkey from

The Republic of Korea enters the top five in 2021. Turkey jumps into the top 50 at 41st place.

France breaks into the top 15 and ranks 11^{th} in 2021. India and the Philippines reach the top 50.

China breaks into the top 15 in 2019; it is 12^{th} in 2021. Israel makes it to top 10.

Sweden has been in the top 3 between 2011 and 2021. Chile moves into the top 50.

Switzerland has ranked first between 2011 and 2021. Malaysia gets closer to top 35.

Top three innovation economies by income group

High-income

- 1 Switzerland
- 2 Sweden
- 3 United States of America

Upper middle-income

- 1 China
- 2 Bulgaria ↑
- 3 Malaysia ↓

Lower middle-income

- Viet Nam
- 2 India ↑
- 3 Ukraine ↓

Low-income

- 1 Rwanda ↑
- 2 Tajikistan ☆
- 3 Malawi ☆

65th in 2011 to 41st in 2021; Viet Nam from 76th in 2012 to 44th this year; India from 62nd to 46th; and the Philippines from 91st to 51st. It is noteworthy that these are particularly large economies, which have the potential to radically change the global innovation landscape for good.

Turkey makes it into the top 50, gaining 10 ranks this year to reach the 41st position. Viet Nam is overtaken by Thailand, as it declines by two ranks, from 42nd to 44th. This is nevertheless a considerable improvement on its average rank of 68th during the period 2013–2015. Viet Nam continues to lead the lower middle-income group (Table 1).

India (46th) moves further ahead, by two spots (48th in GII 2020), after making it into the top 50 last year. It takes 2nd place in the lower middle-income group. India held the 3rd position in its income group in 2019 and 2020 having entered the top three in 2019. India has also been portrayed as successful in developing sophisticated services that are technologically dynamic and can be traded internationally (Aghion *et al.*, 2021). It continues to lead the world in the ICT services exports indicator (1st)

and holds top ranks in other indicators, such as Domestic industry diversification (12th) and Graduates in science and engineering (12th).

Aside from the TVIPs, there are other economies that move up the rankings this year. Among the most notable movers are the Islamic Republic of Iran (60th), Oman (76th), Uzbekistan (86th), Paraguay (88th), Cabo Verde (89th) and Sri Lanka (95th).

Outside the top 100, Guatemala (101st), Tajikistan (103rd), Madagascar (110th) and Zimbabwe (113th) have made the most progress through the ranks, improving by between five and seven positions overall.

Rwanda (102nd) regains the 1st position in the low-income group after being 2nd in 2020. It ranked 1st in 2019, 2016 and 2015 and has been consistently in the top three of its income group since 2014.

Tajikistan (103rd) and Malawi (107th) make it into the top three in the low-income economies group (see Table 1).

Note: The overall Global Innovation Index rank is reported in brackets next to the economy.

Innovation overperformers

Several developing economies are performing above expectation on innovation relative to their level of economic development.

For several years, the GII has demonstrated the positive relationship between innovation and economic development: the more developed an economy is, the more it innovates, and vice versa (Figure 3). However, some economies break out of this pattern. Some perform above or below expectations, relative to their predicted performance and level of development.

In the GII 2021, 19 economies are performing above expectations relative to their level of development – termed innovation achievers (Table 2).

India, Kenya, the Republic of Moldova and Viet Nam are still record holders for being innovation achievers for 11 consecutive years. India's innovation performance is above the average for the upper middle-income group in five of the seven innovation pillars (it scores below average in the pillars of Infrastructure and Creative outputs). Kenya keeps its 3rd place in sub-Saharan Africa and scores above its income group in Institutions, Market and Business sophistication and Knowledge and technology outputs. It also scores above the average for its region in Human capital and research and Creative outputs. Viet Nam continues to score above the lower middle-income group average in all pillars and scores even above the average of the upper middle-income group in Market and Business sophistication, as well as in both output pillars.

However, there is change too this year. Brazil (57th), the Islamic Republic of Iran (60th) and Peru (70th) are innovation achievers in 2021 for the first time ever. In the case of Brazil, this distinction coincides with an upward move in the rankings to gain the 57th place.

Sub-Saharan Africa is the region with the highest number of economies performing above expectations (six in total). South East Asia, East Asia, and Oceania is 2nd (with four economies), Europe is 3rd (three economies), and Northern Africa and Western Asia, Latin America and the Caribbean, and Central and Southern Asia tie in 4th place (with two innovation achievers each).

Conversely, 31 economies are performing below expectations on innovation. In the high-income group, three are European Union economies – Greece, Lithuania and Romania. In the upper middle-income group, there are two Latin American and Caribbean economies – Argentina and the Dominican Republic. In the lower middle-income group, 11 economies are performing below expectations for their level of development, notably five from sub-Saharan Africa – Angola, Benin, Côte d'Ivoire, Cameroon and Nigeria.

Relative to 2020, 30 economies changed performance groups. Fifteen economies changed their performance status from below expectations to matching expectations. The majority of these cases (six economies) are from Latin America and the Caribbean – the Plurinational State of Bolivia, Chile, Ecuador, Guatemala, Paraguay and Uruguay.

The persistent regional innovation divide

The geography of innovation is changing unevenly. South East Asia, East Asia, and Oceania is closing the global innovation divide with Northern America and Europe.

Despite some innovation "catch-up", divides still exist with respect to national innovation performance in the world regions. This year, there are no changes in terms of which world regions perform best in innovation. Northern America and Europe continue to lead, followed by South East Asia, East Asia, and Oceania (SEAO), and, more distantly, by Northern Africa and Western Asia, Latin America and the Caribbean, Central and Southern Asia, and sub-Saharan Africa, respectively.

Northern America

Northern America, composed of the United States and Canada, is the most innovative world region. The United States keeps its 3rd place in the GII ranking, and Canada goes up one spot to reach the 16th place. The region is the highest performer in all GII pillars compared to all other world regions. The United States performs best in Business sophistication (2nd) and Knowledge and technology outputs (3rd), while Canada comes top in Market sophistication (1st) and fifth in Institutions.

Europe

Europe is still the second most innovative region in the world. It hosts a large number of innovative economies: 16 European economies are innovation leaders (i.e., in the top 25). A total of 10 economies move up the ranks this year: France (11th), Iceland (17th), Austria (18th), Estonia (21st), Hungary (34th), Bulgaria (35th), Slovakia (37th), Lithuania (39th), the Russian Federation (45th) and Belarus (62nd).

Performing above expectations for level of development

Table 2 Innovation achievers in 2021, their income group, region, and years as an innovation achiever

Economy	Income group	Region	Years as an innovation achiever (total)
India	Lower-middle income	Central and Southern Asia	2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021 (11)
Kenya	Lower-middle income	Sub-Saharan Africa	2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021 (11)
Republic of Moldova	Lower-middle income	Europe	2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021 (11)
Viet Nam	Lower-middle income	South East Asia, East Asia, and Oceania	2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021 (11)
Malawi	Low-income	Sub-Saharan Africa	2012, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021 (9)
Mongolia	Lower-middle income	South East Asia, East Asia, and Oceania	2011, 2012, 2013, 2014, 2015, 2018, 2019, 2020, 2021 (9)
Rwanda	Low-income	Sub-Saharan Africa	2012, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021 (9)
Ukraine	Lower-middle income	Europe	2012, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021 (9)
Thailand	Upper-middle income	South East Asia, East Asia, and Oceania	2011, 2014, 2015, 2018, 2019, 2020, 2021 (7)
Bulgaria	Upper-middle income	Europe	2015, 2017, 2018, 2020, 2021 (5)
Madagascar	Low-income	Sub-Saharan Africa	2016, 2017, 2018, 2020, 2021 (5)
South Africa	Upper-middle income	Sub-Saharan Africa	2018, 2019, 2020, 2021 (4)
Morocco	Lower-middle income	Northern Africa and Western Asia	2015, 2020, 2021 (3)
Philippines	Lower-middle income	South East Asia, East Asia, and Oceania	2019, 2020, 2021 (3)
Tunisia	Lower-middle income	Northern Africa and Western Asia	2018, 2020, 2021 (3)
United Republic of Tanzania	Lower-middle income	Sub-Saharan Africa	2017, 2020, 2021 (3)
Brazil	Upper-middle income	Latin America and the Caribbean	2021 (1)
Iran (Islamic Republic of)	Upper-middle income	Central and Southern Asia	2021 (1)
Peru	Upper-middle income	Latin America and the Caribbean	2021 (1)

Source: Global Innovation Index Database, WIPO, 2021.

Notes: Income group classification follows the World Bank Income Group Classification (June, 2020). Geographic regions correspond to the United Nations publication on standard country or area codes for statistical use (M49).

On average, Europe is the second best performer worldwide, behind Northern America, in all GII pillars, except for Market sophistication, where it is also behind the average of the SEAO region. Finland has the most highly performing Institutions in the region (2nd worldwide). Sweden leads in Human capital and research (2nd) and Business sophistication (1st), Norway comes top in Infrastructure worldwide (1st), while the United Kingdom leads in Market sophistication (4th). Switzerland is the regional leader in innovation outputs: it ranks 1st worldwide in Knowledge and technology outputs and 2nd in Creative outputs.

South East Asia, East Asia, and Oceania (SEAO)

The innovation performance of the SEAO region has been the most dynamic in the past decade, closing the gap with Northern America and Europe. Five SEAO economies are world innovation leaders: the Republic of Korea (5th), Singapore (8th), China (12th), Japan (13th), and Hong Kong, China (14th). Among these leaders, China, the Republic of Korea and Japan have made the greatest advances up the rankings in the past 10 years (see Table 3). Thailand (43rd), Viet Nam (44th), the Philippines (51st) and Indonesia (87th) have moved up between 5 and 40 GII ranks over the past decade. Thailand and Viet Nam rank among the top 30 worldwide in Market sophistication, as does the Philippines in Knowledge and technology outputs. They are now leaders in key innovation indicators, too. For instance, Thailand ranks 1st in R&D financed by business; and Viet Nam and the Philippines are world leaders in High-tech exports.

Northern Africa and Western Asia

In Northern Africa and Western Asia, the United Arab Emirates (UAE) remains in the top 35 and moves up to achieve the 33rd rank. Turkey makes a big jump into the top 50, reaching the 41st spot. An additional eight economies in the region move up the ranks, including Egypt (94th) and Algeria (120th).

Cyprus is the regional leader in Institutions (26th) and Creative outputs (20th), while Israel leads in Knowledge and technology outputs (6th), Market sophistication (8th), Business sophistication (8th) and Human capital and research (19th). The UAE tops the region in Infrastructure (14th).

Latin America and the Caribbean

In Latin America and the Caribbean, no economy makes it into the top 50. Chile (53rd), Mexico (55th), Costa Rica (56th) and Brazil (57th) are the only economies in the region in the top 60 (see Table 4). Moreover, with the exception of Mexico, these Latin American innovation pockets have not improved their rankings consistently over the past 10 years. However, Brazil makes a strong advance this year, improving by five positions and achieving its best rank since 2012.

Chile has the most balanced innovation system, ranking highest in the region in Institutions (40th) and Infrastructure (47th) (Table 5). Conversely, and relative to their performance in all GII pillars, Mexico is still behind in Institutions (77th) and Infrastructure (67th), while Costa Rica and Brazil are lagging in Infrastructure and Market sophistication. Brazil is the only economy in the region for which expenditures on R&D are above 1 percent of GDP and comparable to some European economies, such as Croatia and Luxembourg. Brazil also ranks highest in the region in the indicator Global corporate R&D investors (26th), above Mexico (31st) and Argentina (36th).

In the top 80, Uruguay (65th), Colombia (67th), Peru (70th) and Argentina (73rd) all moved up the ranks in 2021. Over the

past 10 years, Colombia and Peru have improved their rankings, but not at a steady pace and with some difficulty. Colombia still has a relatively unbalanced innovation system, performing less well in Human capital and research (78th) and in the innovation outputs pillars, in contrast to its relatively good performance in Market sophistication (42nd) and Business sophistication (50th). Peru achieves its best ranking this year in Market and Business sophistication (38th and 37th, respectively), but still struggles to translate its innovation inputs into outputs. It is also an innovation achiever for the first time this year, highlighting its potential for further improvements in the future (see Table 2).

Central and Southern Asia

In Central and Southern Asia, India leads in 46th position, having consistently risen up the ranks since 2015, when it ranked 81st. The Islamic Republic of Iran is 2nd in the region, going up to 60th place. Kazakhstan ranks 3rd at the 79th position (see Table 3). Uzbekistan continues to move upward, by seven places, and achieves the 86th rank in 2021. The innovation performance of Kazakhstan (79th) and Tajikistan (103rd) improved in 2021 but has been less steady over the past years.

Table 5 GII 2021 rankings overall and by pillar

Country/Economy	Overall Gll	Institutions	Human capital and research	Infrastructure	Market sophistication	Business sophistication	Knowledge and technology outputs	Creative outputs

The United States leads in several key innovation indicators. Hong Kong (China), Israel and Singapore follow

The economies at the top of the rankings are world leaders in key innovation indicators. This year, the United States is the absolute leader in this regard; holding first place in 13 indicators out of the 81 used, including metrics such as Global corporate R&D investors, venture capital deals received, the quality of its universities, the quality and impact of its scientific publications (H-index), the number of patents by origin and E-participation. Hong Kong, China follows the United States in 2nd place, with world-topping performances in indicators such as New businesses, High-tech imports and Global brand value. Israel and Singapore tie in 3rd place, attaining the top rank in R&D expenditures and Regulatory quality, respectively. They are followed by China and the Republic of Korea in joint 5th place, leading on High-tech exports and Researchers, among other indicators. Luxembourg comes 7th with the top performance in Knowledge-intensive employment; and Switzerland and Japan are equal 8th, leading in Patent families, and Production and export complexity.

Economies with the most top-ranked GII indicators, 2021

	Innovation indicators in which economies score best worldwide									
Economy	Inputs	Outputs	Total							
United States of America	6									
Hong Kong, China		4								
Israel	6	4	10							
Singapore	6	4								
China	3	6	9							
Republic of Korea	5	4	9							
Luxembourg	6	2	8							
Switzerland	2	4	6							
Japan	2	4	6							

Source: Global Innovation Index Database, WIPO, 2021.

Note: The GII methodology allows multiple economies to rank first in an indicator; see Economy profiles and Appendix I.

Overall, the region performs best in Market sophistication. In terms of innovation inputs, Kazakhstan leads the region in Institutions (45th rank overall) and Infrastructure (58th), the Islamic Republic of Iran leads in Human capital and research (49th), Uzbekistan in Market sophistication (24th) and India in Business sophistication (52nd). India is also at the top of the region in the Knowledge and technology outputs pillar (29th), while the Islamic Republic of Iran comes top in Creative outputs (46th).

Sub-Saharan Africa

In sub-Saharan Africa, only Mauritius (52nd) and South Africa (61st) rank in the top 65; and only Kenya (85th) and the United Republic of Tanzania (90th) have remained firmly within the top 100 and have improved their performance over the past five years. No economy has steadily improved its rankings over time. A total of 10 economies in the region move up the GII ranks this year, including Kenya (85th), Namibia (100th), Malawi (107th), Madagascar (110th), Zimbabwe (113th) and Burkina Faso (115th). Cabo Verde reaches 89th place this year, a considerable increase from its position at 103rd place in 2013.

On average, the region performs best in Institutions, even ranking above the average of the Central and Southern Asia region. Mauritius ranks highest in the region in Institutions (21st), Infrastructure (65th) and Creative outputs (31st). Namibia comes top in Human capital and research (57th), and South Africa in Market sophistication (23rd), Business sophistication (51st) and Knowledge and technology outputs (61st).

Creating balanced and efficient innovation ecosystems

Innovation leaders have balanced and high-performing innovation systems. However, efficiency in translating innovation inputs into outputs is still eluding several high-income economies

Innovation leaders and the economies that have consistently advanced up the GII ranks over the past decade have dynamic innovation systems and combine efficiency in translating innovation inputs into outputs with a balanced and strong performance across all GII pillars.

Translating an economy's investments in innovation – in the form of R&D, education, and solid infrastructure and institutions supporting innovative activities – into innovation outputs is not an easy feat. Some economies excel in efficiently converting innovation inputs into outputs. Among the high-income group economies, Switzerland (1st) produces considerably higher levels of outputs than other high-income economies, such as Sweden (2nd), the United States (3rd) and Singapore (8th), at comparable levels of innovation inputs (Figure 4). The Czech Republic (24th) produces the same levels of outputs as Japan (13th) or Singapore (8th) at much lower levels of innovation inputs.

Among the upper middle-income group economies, China (12th) ranks 7th overall in the Innovation Output Sub-Index, and its levels of outputs are comparable to those of high-income economies like the United Kingdom (4th), the Netherlands (6th) and Germany (10th), even though its overall level of innovation inputs is lower. Bulgaria (35th) has outputs comparable to high-income economies, such as Norway (20th) and Italy (29th), with fewer inputs.

The United Republic of Tanzania (90th), among the lower middle-income group economies, performs on innovation outputs at levels comparable to high-income Latin American economies Chile (53rd) and Uruguay (65th). In addition, Viet Nam (44th) and the Philippines (51st) do the same, relative to other high-income European Union economies, such as Latvia (38th), Lithuania (39th) and Poland (40th), with a lower level of innovation inputs.

Low-income sub-Saharan Africa economies Malawi (107th), Madagascar (110th), Ethiopia (126th) and Guinea (130th) are also efficiently transforming their limited innovation inputs and resources into innovation outputs.

However, there are also several high-income economies that struggle to obtain a better balance between their level of investments and their level of innovation results, to the detriment of their overall innovation performance and GII ranking. This group includes, notably, oil and natural gas producers and exporters Canada (16th), Norway (20th), the United Arab Emirates (UAE) (33rd), Bahrain (78th) and Brunei Darussalam (82nd). All these economies rank considerably lower in the Innovation Output Sub-Index, relative to their ranking in the Innovation Input Sub-Index. For instance, the UAE ranks 23rd in innovation inputs overall, and 47th in outputs. The economy's ranking in innovation outputs has, however, improved this year relative to 2020, moving in the right direction to achieve greater balance in the innovation system.

Peru (70th), despite being an innovation achiever, it is also struggling to effectively utilize its innovation inputs (ranked 52nd in the Innovation Input Sub-Index) into innovation results (82nd) and more effort is needed to achieve a better balance in the innovation system.

Figure 4 Innovation input to output performance, 2021

24 Global Innovation Index 2021

Moreover, innovation leaders have complementarity and balance across the different areas of their innovation system. A successful innovation system balances knowledge creation, exploration and investments – the innovation inputs – with the production of ideas and technologies toward application, exploitation and impact – the innovation outputs.

A balanced and strong performance across all seven pillars is most clearly evident among the innovation leaders (top 25). Only 15 economies – including Switzerland, Sweden, the United States, Singapore and France, or 11 percent of all economies ranked this year, have strong performances across all seven GII pillars (Table 5).

However, certain economies that are ranked lower overall in the GII are also leaders in specific areas. Examples include Turkey, highly ranked in Human capital and research (26th); Thailand, Viet Nam and Uzbekistan, with their relatively high ranking in Market sophistication (27th, 22nd and 24th, respectively); and Mongolia, ranked in the top 30 in Creative outputs (28th). These discrepancies in performance within economies also hint at innovation systems that are changing and dynamic with the potential for increased overall performance in the future.

Table 6 Top S&T cluster of each economy or cross-border region, 2021

Rank	Cluster name	Economy	Rank change
1	Tokyo-Yokohama	JP	0
2	Shenzhen–Hong Kong–Guangzhou	CN/HK	0
3	Beijing	CN	1
4	Seoul	KR	-1
5	San Jose–San Francisco, CA	US	0
10	Paris	FR	0
15	London	GB	0
19	Amsterdam-Rotterdam	NL	-1
20	Cologne	DE	-1
27	Tel Aviv–Jerusalem	IL	-3
28	Taipei–Hsinchu	TW	-1

The GII top science and technology clusters

New science and technology (S&T) clusters are emerging. Clusters in China made the most consistent rank improvements. Delhi, Mumbai and Istanbul also advanced strongly this year.

Divides also exist in the ranking of the global science and technology (S&T) clusters. The top 100 S&T clusters are hosted by 26 economies, of which six – Brazil, China, India, the Islamic Republic of Iran, Turkey and the Russian Federation – are middle-income economies (Table 6).

Tokyo-Yokohama is the top-performing cluster again, followed by Shenzhen–Hong Kong–Guangzhou, Beijing, Seoul and San Jose–San Francisco (see Annex Table 3, Top 100 clusters). The top 10 clusters remain the same as last year with only minor shifts. Beijing overtook Seoul to occupy the 3rd spot, and Shanghai switched with New York City, NY in 8th position. The largest increases in rank came from three Chinese clusters – Qingdao (+16 positions), Shenyang (+14) and Dalian (+13). Shenyang and Dalian, along with the Korean cluster Daegu, make up the three new entrants into this year's top 100 clusters (Map 1).

The United States continues to host the largest number of clusters (24), followed by China (19), Germany (9) and

Japan (5). Chinese clusters experienced the largest increases in S&T output, with the median increase equating to +14.4 percent, and China hosts the fastest growing clusters with Qingdao (+33.1 percent) and Suzhou (+21.7 percent). Other middle-income clusters besides China also experienced strong growth, including Delhi (+6.6 percent), Mumbai (+6.3 percent) and Istanbul (+5.5 percent). High-income economy clusters grew at a slower pace than clusters in middle-income economies. A decline within clusters in the United States accounted for most of this slower growth. There were some notable exceptions, namely Kanazawa (+12.1 percent) in Japan, Daejon (+9.0 percent) in the Republic of Korea and Melbourne (+7.8 percent) in Australia.

Many European and U.S. clusters show more intense S&T activity than their Asian counterparts do. The United States has nine clusters in the top 25 by S&T intensity, followed by Germany and Sweden (with three each). Cambridge in the United Kingdom and Eindhoven in the Netherlands/Belgium, emerge as the most S&T-intensive clusters. Ann Arbor, Michigan (United States), Oxford (United Kingdom) and San Jose–San Francisco, CA (United States) follow (see Annex Table 4, Ranking of S&T intensity, 2015–2019). As was the case in the previous year's ranking, S&T intensity was higher if patenting activity drove a cluster's output, with 15 out of the top 25 clusters deriving the majority of their output from patents.

Conclusion

In conclusion, the GII continues to support and foster innovation through changing times. The aim of the GII is to provide insightful data on innovation and, in turn, to assist policymakers in evaluating their innovation performance and making informed innovation policy decisions. The 2021 edition of the GII – with its informed conclusions on innovation developments both generally and in the context of the COVID-19 pandemic – makes a significant contribution to this end.

Two key insights emerge from this year's report.

- The global innovation landscape is changing too slowly. The GII has been warning of this for several years now, as high-income economies, notably from Northern America and Europe, continue to lead the GII ranks and have the strongest and most balanced innovation systems. There is an urgent need for this to change, particularly in the context of the COVID-19 crisis. Confronted with an unprecedented crisis, it is important to fully leverage the power of innovation to collectively build a cohesive, dynamic and sustainable recovery. The short-term and longer term impacts of the pandemic on science and innovation systems have to be monitored and findings acted up on.
- There are a few middle-income economies, notably the TVIPs, that are catching up with the leaders. However, the pandemic's effects on R&D investment
- the uneven reduction of R&D expenditures in some sectors and the fact that governments have not made innovation and R&D a priority in current stimulus packages – will hamper convergence. It is therefore crucial that support for innovation becomes broader and that it is conducted in a countercyclical way (i.e., as business innovation expenditures slump, governments strive to counteract that effect with their own expenditure boosts to innovation, even in the face of higher public debt).

Future editions of the GII will track these developments closely and continue the journey toward enabling policy and business leaders by fostering a better understanding and measurement of innovation.

Notes

- 1 It is important to remember that various factors, including changes to the methodology for the calculation of indicators, data availability and changes to the GII model and measurement framework, influence the year-on-year comparisons of GII ranking. See Appendix I for more details.
- 2 Nine economies are no longer innovation achievers in 2021, relative to 2020: three economies from Europe (North Macedonia, Montenegro and Serbia); two from Latin America and the Caribbean (Costa Rica and Jamaica); two from Northern Africa and Western Asia (Armenia and Georgia); and two from sub-Saharan Africa (Mozambique and Niger).
- 3 Angola (132nd) rejoins the innovation ranking in 2021, thanks to improved availability of innovation data. The last time Angola was included in the GII was in 2015.
- 4 S&T output growth refers to the net S&T output over time, which is the difference in total patents and publications for each cluster, for all points that were located inside the same cluster compared to the previous year.

The Global Innovation Index 2021

The Global Innovation Index 2021 (GII) takes the pulse of the most recent global innovation trends and ranks the innovation ecosystem performance of 132 economies, while highlighting innovation strengths and weaknesses and particular gaps in innovation metrics.

As this report goes to press, the world is struggling to cope with the COVID-19 pandemic. In its new Global Innovation Tracker section, the report draws on a select set of indicators, including the effects on research and development expenditures or access to innovation finance, to provide a perspective on the pandemic's impact on global innovation performance.

Since its inception in 2007, the GII has shaped the innovation measurement agenda and become a cornerstone of economic policymaking, with an increasing number of governments systematically analyzing their annual GII results and designing policy responses to improve their performance. The GII has also been recognized by the UN Economic and Social Council in its 2019 resolution on Science, Technology and Innovation for Development as an authoritative benchmark for measuring innovation in relation to the Sustainable Development Goals (SDGs).

The GII is published in partnership with the Portulans Institute, the Confederation of Indian Industry (CII), the Brazilian National Confederation of Industry (CNI), Ecopetrol and the Turkish Exporters Assembly (TIM) and is supported by its GII Advisory Board and Academic Network.

The full report and the GII mobile apps – Android and iOS – can be downloaded at https://globalinnovationindex.org.
